

## State-of-the-art OCT Screening now available

Ocular Coherence Tomography (OCT) is a huge step forward in the provision of comprehensive eye care. Using the latest state-of-the-art technology, our experts are able to take a digital photograph of your eye as well as being able to take a 3 dimensional cross sectional scan.

It's completely painless and allows us to instantly diagnose much earlier than normally possible, common and not-so-common conditions.

We'll store the images on our secure computer servers and each time you visit us, we're able to use the technology to make vital comparisons against your previous scans/photographs. This gives us essential information that can help to prevent further damage or enables us to recommend treatment at a much earlier stage. This usually means we can help prevent problems and safeguard your sight for the future.

Sign-up for an Optomeyes Care Plan today and take advantage of OCT Screening now! Ask for details.

OCT is an extremely advanced health check for all ages. It's very similar to ultrasound but uses light waves instead of sound waves. It shows your Optometrist exactly what's going on beneath the surface of your eye. This information could prove vital and can help prevent problems in the future.

There is an additional charge for an OCT scan except for people on our Optomeyes-S and Optomeyes-Plus plans. Ask a member of staff for more details.

- Diabetic eye screening
- OCT 3-D Screening
- Glaucoma screening & hospital shared eye care
- NHS & Private eye examinations
- Contact lens specialists
- Orthokeratology (vision correction alternative to laser - for those suitable)
- Digital imaging of the internal & external structures of the eye
- Corneal topography/pachymetry (advanced scanning techniques)
- Children's examinations & coloured overlays for specific learning difficulties
- Hospital cataract referral centre
- Using the latest technology to enable early diagnosis of ocular & health problems
